DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 3/9/2007 has been entered. The applicant has submitted an IDS for consideration.

Allowable Subject Matter

2. Claims 1-5 and 7-9 are pending. Claims 1-5 and 7-9 allowed.

3. The documents listed on the IDS submitted 3/9/2007 have been fully considered. The claims above are patentably distinct from the teachings of the IDS documents. A new document Reiger et al. (EP Patent Application Publication No. EP1092384 A2) was discovered during re-examination. Reiger et al. teaches, Fig. 5, a turbidity sensor with a measuring zone in a lower plane of a pipe in a dishwashing machine. The pipe is a helical coil, Fig. 2, and does not comprise a conduit steadily enlarging in flow cross section relative to the conduit as required by claim 1. It would not have been obvious to one of ordinary skill in the art at the time of the invention to modify Reiger et al. to produce the apparatus of the instant application.
